In the Claims:

The claims read as follows:

- 1-6. (Canceled)
- 7. (Previously Presented) A device for delivering fluid into a vessel wall comprising: a catheter having at least one internal lumen;

an inflatable balloon in fluid communication with at least one internal lumen of the catheter and having an exterior surface;

at least one injector mounted on the exterior surface of the inflatable balloon in fluid communication with at least one internal lumen of the catheter, wherein the injector comprises

> a hollow protrusion having a first end and a second end, and a fluid channel; and

a sealing unit having a seal for sealing the fluid channel of the injector wherein the seal seals the second end of the hollow protrusion.

- 8. (Canceled)
- 9. (Previously Presented) A device for delivering fluid into a vessel wall comprising: a catheter having at least one internal lumen;

an inflatable balloon in fluid communication with at least one internal lumen of the catheter and having an exterior surface;

at least one injector, having a fluid channel and mounted on the exterior surface of the inflatable balloon, in fluid communication with at least one internal lumen of the catheter; and

a sealing unit having a seal wherein the sealing unit resists fluid flowing adjacent the sealing unit thereby inducing a force on sealing unit, urging the sealing unit to translate, and seal the fluid channel of the injector.

- 10. (Previously Presented) The device of claim 9 wherein the sealing unit is coated.
- 11. (Previously Presented) The device of claim 7 wherein the seal is substantially spherical in shape.
- 12-16. (Canceled)
- 17. (Previously Presented) A device for delivering fluid into a vessel wall comprising:

a catheter having at least one internal lumen;

an inflatable balloon in fluid communication with at least one internal lumen of the catheter and having an exterior surface;

at least one injector, having a fluid channel and mounted on the exterior surface of the inflatable balloon, in fluid communication with at least one internal lumen of the catheter;

a sealing unit having a seal; and

a mechanical system having an elastic band for applying a force urging the seal to seal the fluid channel of the injector.

18. (Previously Presented) A device for delivering fluid into a vessel wall comprising: a catheter having at least one internal lumen;

an inflatable balloon in fluid communication with at least one internal lumen of the catheter and having an exterior surface;

at least one injector, having a fluid channel and mounted on the exterior surface of the inflatable balloon, in fluid communication with at least one internal lumen of the catheter;

a sealing unit having a seal; and

a bond for maintaining the seal in a sealed position against the injector to seal the fluid channel of the injector.

- 19. (Original) The device of claim 18 wherein the bond is an adhesive bond.
- 20. (Original) The device of claim 18 wherein the bond is an electrostatic bond.
- 21. (Original) The device of claim 18 wherein the bond is a chemical bond.

22-25. (Canceled)

١.

26. (Withdrawn) A method for delivering therapeutic into a vessel wall comprising:
inserting a catheter into the vessel of a patient, the catheter having an inflatable balloon with a first internal lumen, a fluid passageway with a second internal lumen, and an injector in fluid communication with the second internal lumen;

positioning the catheter at a diseased portion of the vessel within the patient; inflating the inflatable balloon by forcing fluid into the first internal lumen of the catheter to embed the injector into the vessel wall;

infusing therapeutic into the vessel wall through the injector by forcing therapeutic fluid into the second internal lumen of the catheter and the fluid passageway; and selectively sealing an injector that does not embed into a vessel wall.

27. (Withdrawn) A method for delivering fluid into a vessel wall comprising:

inserting a catheter into the vessel of a patient, the catheter having an inflatable balloon with an internal lumen, and an injector in fluid communication with the inflatable balloon;

positioning the catheter at a diseased portion of the vessel within the patient; inflating the inflatable balloon by forcing fluid into the internal lumen of the catheter to embed the injector into the vessel wall;

infusing fluid into the vessel wall through the injector; and selectively sealing an injector that does not embed into a vessel wall.

- 28. (Withdrawn) The method of claim 27 further comprising:
 infusing therapeutic into the vessel wall through the injector by forcing therapeutic fluid into the internal lumen of the catheter.
- 29. (Previously Presented) The device of claim 9 wherein the seal is coated.
- 30. (Previously Presented) The device of claim 9 wherein the sealing unit is patterned.
- 31. (Previously Presented) The device of claim 9 wherein the seal is patterned.

Docket No. 12013/62102 10/673,430

Although no fees are believed to be due, the Commissioner is hereby authorized to charge Kenyon & Kenyon Deposit Account No. 11-0600 for any applicable fee.

Should there be any questions concerning this matter, the Examiner is invited to contact the Applicant's undersigned attorney.

Respectfully submitted,

Dated: November 6, 2006

Foe Ronald L. Sigworth Reg. No. 53,592
